Vincent Terpstra

London Ontario • vdterpst@gmail.com • (519)-440-8980 • https://vincent-terpstra.github.io/

Full Stack Software Developer with 5+ years of experience building enterprise insurance applications using C#, ASP.NET Core, Blazor, React, SQL Server, and Azure. Experienced designing configurable systems, improving developer productivity through testing and automation.

Technical Skills

Languages: C#, SQL, TypeScript, JavaScript, Python
Frameworks: ASP.NET Core, Blazor, React, Next.js, Node.js
Data: SQL Server, MongoDB, PostgreSQL, Entity Framework Core, Dapper
Cloud & DevOps: Azure, Docker, Git
Testing: xUnit, Moq, WebApplicationFactory
Architecture: REST APIs, Microservices, Dependency Injection

Professional Experience

Software Developer

SEH COMPUTER SYSTEMS INC, Tavistock ON ***2022 – Jan 2026***

Insurance Rating Microservice (C#, ASP.NET Core, SQL Server)

- Architected a configurable Rating API that minimizes annual code changes across multiple insurance lines of business.
- Reduced yearly rating implementation effort from several months to a few weeks through rules-driven configuration.
- Designed flexible request and response models supporting client-specific variations.
- Implemented SQL Server temporal tables to support historical, current, and future-dated rating data.

Insurance Policy Application (React, node.js, Claude AI, MongoDB)

- Leveraged Claude AI to accelerate refactoring, generate implementation scaffolding, and complete feature requests while maintaining code quality.
- Developed HTML templates for PDF generation within a Next.js REST API, improving document consistency and reducing development effort.

Insurance Claims Application – C# Blazor – ASP.net, Entity Framework, Azure, Git

- Developed a claims management system, using Blazor UI and ASP.net REST API
- Introduced an integration testing strategy using WebApplicationFactory and in-memory HTTP clients, reducing production defects and improving debugging efficiency.

Software Developer and IT support

BLACKCREEK TECHNOLOGIES LTD, Stratford ON ***2020 – 2022***

- Developed applications and integrations using ASP.net for both internal and client use.

Education

Computer Programming Diploma - (GPA 4.0/4.0) ***2018 – 2019***
Seneca's School of Information and Communications Technology - Toronto, ON.

GitHub - https://github.com/vincent-terpstra

Sample Blazor Server Application: https://github.com/vincent-terpstra/BlazorServer

- Built a layered Blazor Server application using .NET 7, C#, ASP.NET Core, Razor, MediatR, Entity Framework Core, and Dapper.
- Implemented unit, component, and behavior-driven tests using xUnit, Moq, bUnit, and SpecFlow.

.NET Microservices Backend: https://github.com/vincent-terpstra/MicroservicesOnDocker

- Built a course-guided Dockerized .NET microservices application using REST, gRPC, RabbitMQ, SQL Server, and Kubernetes.
- Configured Kubernetes deployments, ingress, persistence, and messaging infrastructure.

Logic Puzzle game (Godot C#) ***In progress***

- Designing a puzzle game where players manipulate Boolean logic gates to solve increasingly complex circuits. Implementing gameplay systems, state management, and level logic using C#.

Advent of Code Challenges (Python)

LinkedIn - https://www.linkedin.com/in/vincent-douglas-terpstra/

Portfolio - https://vincent-terpstra.github.io/

- Personal projects exploring Java, OpenGL, CUDA, graphics programming, and performance optimization.

Interests - Board games • Tennis • Reading • Distance running • Coffee
